

Convert PCjr color monitor to CGA V1.00

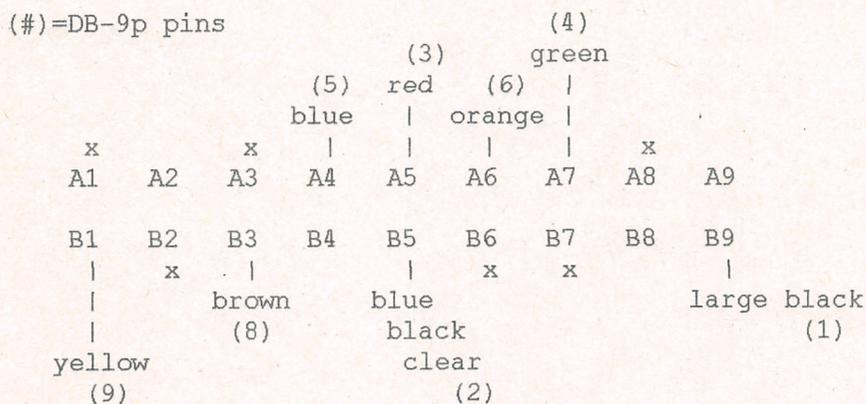

(From Mary A Hemmings)

How to connect PcJr color monitor as CGA

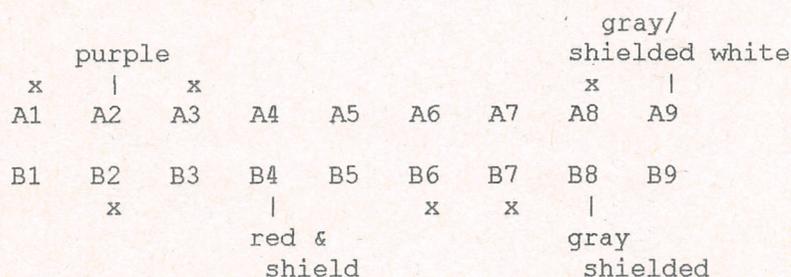

For anyone wanting/needing to connect a PcJr color monitor to a real computer, here's the pin-to-pin translation. I simply chopped off the 18pin rectangular plug from the monitor, and soldered the required wires into a DB-9p from Radio Shack.

While these are the connections for a normal CGA, it is in fact capable of some sort of double-scan to 320x400 or something.

Note also that wire colors could vary some. Check what you have before chopping the connector off if you want to avoid trouble.

The following are NOT USED (make sure the insulation on these leads is intact so they don't short out - there's power on some of them)
