

SR28-0494-1
Course 71021

**Service Education
Student Guide**

IBM 4860 PCjr Product Training

Preface

This publication is primarily intended for use by IBM personnel enrolled in course 71021.

Second Edition (June 1985)

This major revision obsoletes ZR28-0494-0.

References in this publication to IBM products, programs, or services do not imply that IBM intends to make these available in all countries in which IBM operates. Any reference to an IBM program product in this publication is not intended to state or imply that only IBM's program product may be used. Any functionally equivalent program may be used instead.

Publications are not stocked at the address given below. Requests for IBM publications should be made to your IBM representative or to the IBM branch office serving your locality.

Address comments concerning the content of this publication to IBM Corporation, 4304 90L/234-2, 951 NW 51st Street, Boca Raton, Florida U.S.A. 33431. IBM may use or distribute whatever information you supply in any way it believes appropriate without incurring any obligation to you.

GENERAL INFORMATION

BASIC SKILLS

1. Utilize customer - level and advanced - level tests to isolate a failure symptom to:
 - o PCjr system unit
 - o All standard features
 - o All optional features
 - o Any replaceable elements
 - o All adapter cables

2. Locate and identify the following:
 - o System board
 - o Power transformer and power board
 - o Diskette drive and adapter
 - o Side - attached options
 - o Keyboard
 - o Connectors and adapters
 - o Memory and display expansion

LEGEND

BASIC	Beginners all-purpose symbolic instruction code
CPU	Central processing unit
FRU	Field replaceable unit
I/O	Input/output
I/R Link	Infrared link
Kb	Kilobyte
LED	Light emitting diode
Memory	Storage
PICs	Problem isolation charts
POST	Power-on self test
RAM	Random access memory
RF	Radio frequency
ROM	Read only memory

SAFETY

An individual may be exposed to two conditions - NON-HAZARDOUS and HAZARDOUS.

In a NON-HAZARDOUS condition, "an employee may work alone providing arrangements are made for at least an hourly check relative to his/her well being". This may be accomplished by telephone or direct personal communication.

In a HAZARDOUS condition, "an IBM employee shall never work alone". Step 5 in the safety practices section of the Electrical Safety Handbook (Form S229-8124) should be observed if a situation occurs involving any of the following conditions:

- o Presence of exposed potential in excess of 30 Vac or 42.5 Vdc to ground or between components which are likely to be simultaneously contracted.
- o Power supply exposed with safety covers removed and ac power cord plugged into an ac outlet.
- o Power being applied to a machine with moving parts when safety covers are removed.

You should ensure that local arrangements are made to comply with these safety precautions.

COURSE START PROCEDURES

Procedures for FIS II users:

1. Sign on the FIS terminal using the format SEEEEEE/71021 where EEEEE is your serial number.
2. Read each screen carefully and follow directions.
3. Use the enter key to proceed to a new screen.
4. Contact your B/O education coordinator if you need assistance.

You must complete this course and pass the final test with a grade of 100%. A completion certificate will be printed, and a complete will be logged in your history file.

COURSE DESCRIPTION

The IBM PCjr 4860 is a powerful, compact computer system which offers a wide variety of options to the user. This course is designed to teach the configuration of the PCjr 4860-04 (model 4) and PCjr 4860-67 (model 67), the available options and the maintenance strategy. This course consists of one unit.

MATERIALS REQUIRED

- o IBM 4860 PCjr Product Training Student Guide, SR28-0494-1
- o FIS terminal

PREREQUISITES

Prior training on 5150, 5155, 5160 and 5170 (PC, PC Portable, PC XT and Personal Computer AT)

١١١١

UNIT 1 - INTRODUCTION

This unit describes the PCjr 4860-04 and 4860-67, the available options and the diagnostics. This unit contains the following sessions:

- Session 1 - System Configurations
- Session 2 - Diagnostics

SESSION 1 - SYSTEM CONFIGURATION

This session should take approximately .8 hours to complete.

The IBM PCjr 4860 is a highly versatile, compact microcomputer with application in the home and small businesses. There are two models available:

- o The IBM PCjr 4860-04 (model 4)
- o The IBM PCjr 4860-67 (model 67)

This session gives you an overview of the IBM PCjr 4860 and the available features.

OBJECTIVE

Upon completion of this session you should be able to:

1. State the configurations of the IBM PCjr 4860.
2. State and describe all available options.

ASSIGNMENT 1 - STANDARD CONFIGURATIONS

This assignment describes the two different PCjr models available and the standard features.

Objective

State the configurations of the IBM PCjr 4860.

Highlights

- o Models
- o Standard features
- o System board

Activity 1

Reading description of system and components on FIS screen.

Activity 2

Locating and identifying components and FRUs in Appendix A of the student guide.

ASSIGNMENT 2 - OPTIONS

This assignment lists and describes all the options that are available for the PCjr.

Objective

State and describe all available options.

Highlights

- o List of options
- o Options description

Activity 1

Reading description of options on the FIS screen.

Activity 2

Locating and identifying optional features in Appendix A of the student guide.

SESSION 1 - SUMMARY

This concludes Session 1. You should be able to state the configuration of the IBM PCjr 4860-04 and 4860-67 and describe the standard and optional features which are available.

The IBM 4860 PCjr has several diagnostic aids that will help isolate hardware problems. These diagnostics will indicate a specific unit, error code or field replaceable unit (FRU). Diagnostics are discussed and FRUs are identified in Session 2.

SESSION 2 - DIAGNOSTICS

This session should take approximately .8 hours to complete.

There are two levels of diagnostic programs for the IBM PCjr 4860. These diagnostic programs help isolate a problem in the PCjr system. This session will discuss these diagnostic programs and the replaceable units.

OBJECTIVE

Upon completion of this session you should be able to:

1. Run power-on self tests (POSTs) and customer tests.
2. Run advanced power-on self tests and advanced tests.
3. Identify the replaceable elements and field replaceable units (FRUs) in the PCjr.

ASSIGNMENT 1 - CUSTOMER LEVEL TESTS

This assignment shows an overview of the diagnostic programs available for the IBM PCjr 4860 and the procedures for running customer - level tests.

Objective

Run power-on self tests and customer tests.

Highlights

- o Diagnostic programs overview
- o Power-on self tests
- o Customer tests

Activity 1

Reading on the FIS terminal.

Activity 2

Locating charts and reading test procedures in the student guide.

ASSIGNMENT 2 - ADVANCED - LEVEL TESTS

This assignment teaches the procedures for running advanced POST and advanced tests.

Objective

Run advanced power-on self tests and advanced tests.

Highlights

- o Advanced POST
- o Advanced tests

Activity 1

Reading on the FIS terminal.

Activity 2

Reading test procedures in the student guide.

ASSIGNMENT 3 - REPLACEABLE UNITS

The IBM 4860 PCjr is comprised of two types of replaceable units. They are the replaceable element and the field replaceable unit (FRU).

Objective

Identify the replaceable elements and field replaceable units (FRUs) in the PCjr.

Highlights

- o Field replaceable units
- o Replaceable elements

Activity 1

Reading description of replaceable units on the FIS screen.

Activity 2

Locating replaceable units in the student guide.

SESSION 2 - SUMMARY

This concludes Session 2. You should be able to run customer - level tests, advanced - level tests and identify the replaceable units.

APPENDIX A

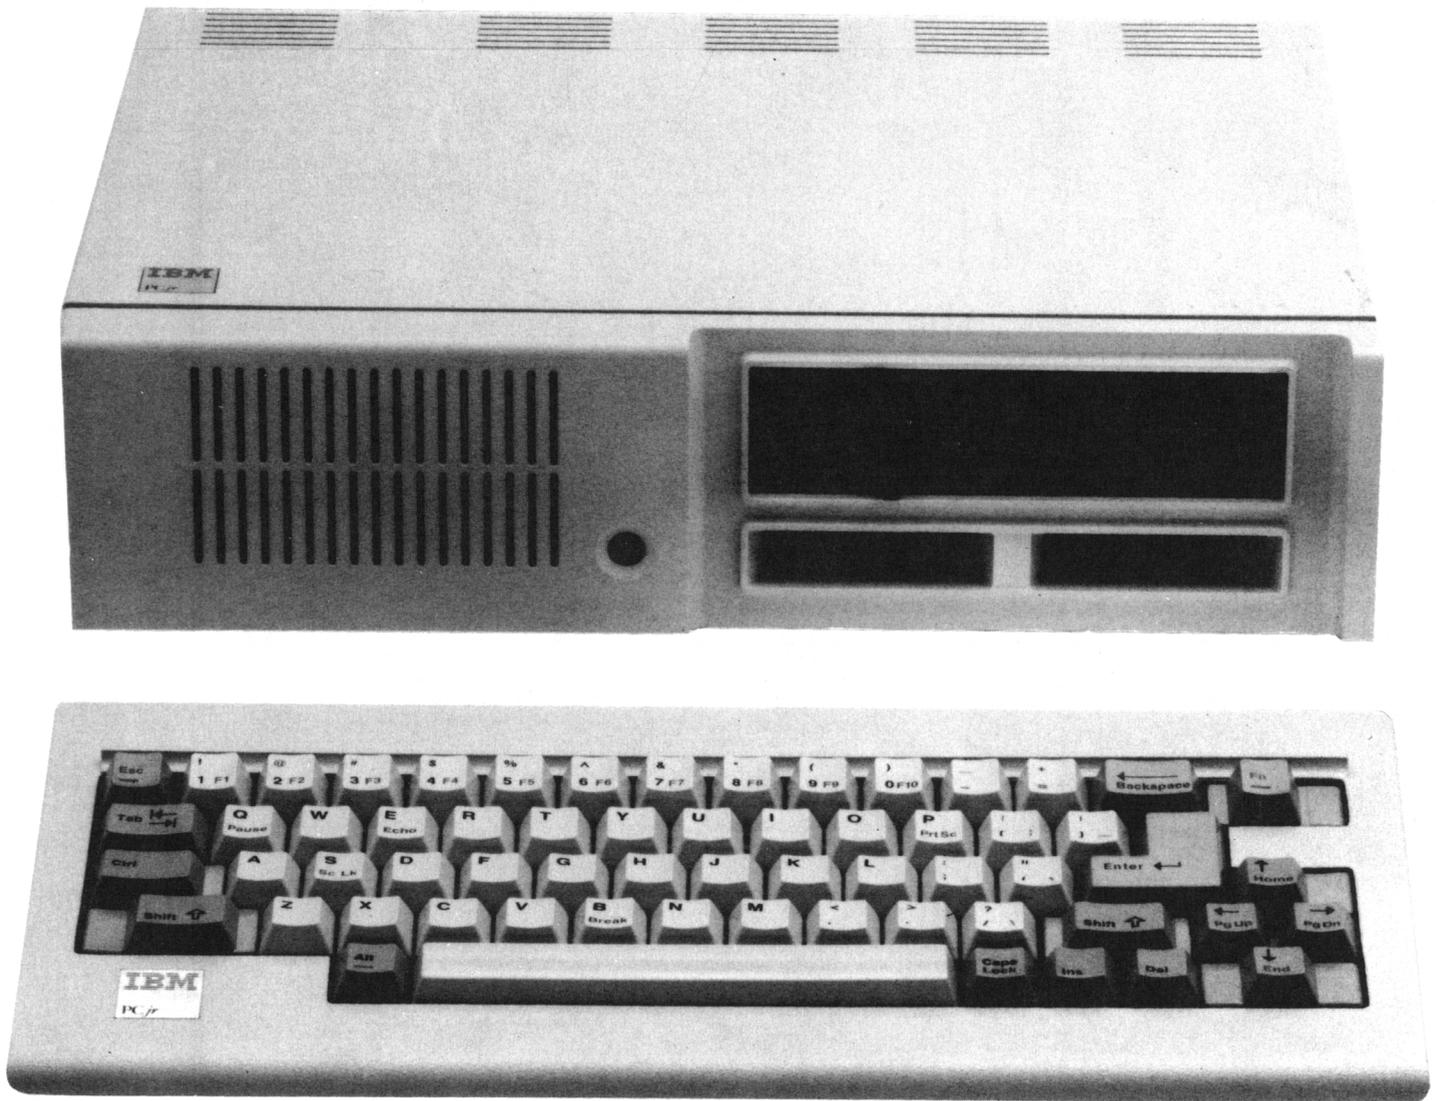

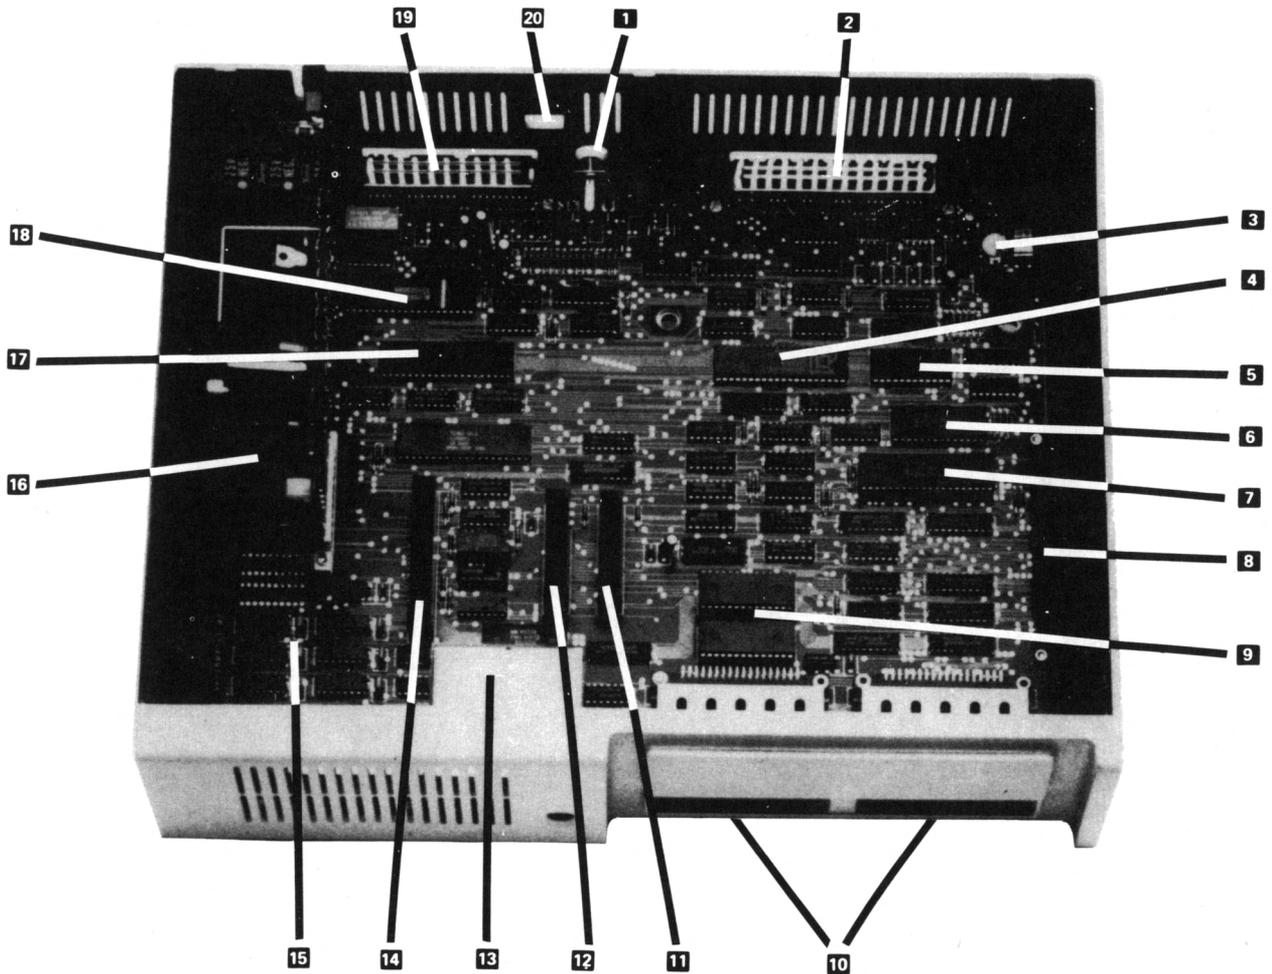

FIGURE 1.1

Pictured is the IBM PCjr 4860-67 (model 67).

- | | | | |
|-----|--|-----|---|
| 1. | Composite video connector | 11. | Diskette adapter I/O slot |
| 2. | Connectors (see Figure 1.6 for detail) | 12. | Internal modem I/O slot |
| 3. | System clock circuitry | 13. | Infra-red receiver |
| 4. | 8255A-5 for I/O expansion connector | 14. | 64K memory and display expansion slot |
| 5. | 8253-5 chip used for date, time and sound generation | 15. | RAM memory |
| 6. | 8259A interrupt controller | 16. | Power regulator card |
| 7. | 8088 CPU | 17. | 6845 CRT controller |
| 8. | I/O expansion connector | 18. | 8250 async communications chip for serial port |
| 9. | Two 32K ROM chips | 19. | Connectors (see Figure 1.6) |
| 10. | Two cartridge slots | 20. | Opening for internal modem modular plug and cable |

4 = Off	4 = Off	4 = Off

128KB Memory Expansion Attachment Switch Settings

First, the IBM Color Bar Screen with correct memory appears.

Second, the system unit beeps once.

Third, the IBM Personal Computer Basic Message Screen appears (assumes no diskette installed).

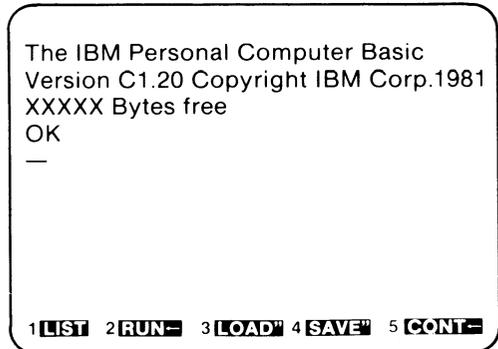

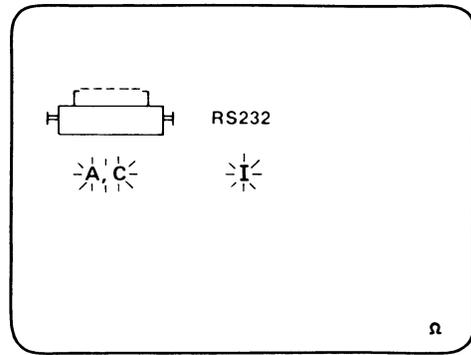

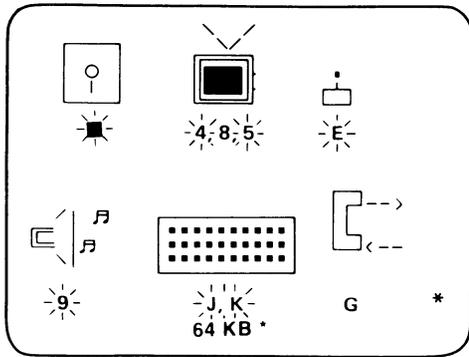

FIGURE 2.1

FIRST MENU SCREEN

SECOND MENU SCREEN

NOTE

The Advanced Test menu screen and the Customer Test menu screen look identical with one exception. The Test Tag under the joystick on the Advanced Test menu screen is an E. The Test Tag under the joystick on the Customer Test menu screen is a 6.

The following chart explains what the symbols represent on the menu screen. An asterick (*) after a description means the symbol appears only when the option is attached to the system unit.

	Diskette-drive test		Graphics printer test
	Display and light pen test		Internal modem test
	Joystick test		Compact printer test*
	Sound test	RS232	Serial port test
			Keyboard test

Features	1-3
Options	1-3

Notes:

1-2

Description

The IBM PC jr is a low-cost, compact, table top computer. Many programs used by the family of IBM Personal Computers can also be used by the IBM PC jr .

Features

The IBM PC jr has this minimum configuration:

- IBM PC jr System Unit
 - 64K random access memory (RAM)
 - 64K read only memory (ROM)
 - Cassette, light pen, serial, and joystick ports
 - Direct drive video, composite video, and television ports
 - Infra-red receiver
 - Intel 8088 microprocessor
 - Three-voice sound generator
 - Two program cartridge slots
- IBM PC jr Cordless Keyboard
- IBM PC jr Power Transformer

Options

The IBM PC_{jr} options are:

- IBM PC_{jr} 64KB Memory and Display Expansion
- IBM PC_{jr} Attachable Joystick
- IBM PC_{jr} Adapter Cable for Cassette
- IBM PC_{jr} Adapter Cable for Serial Devices
- IBM Connector for Television
- IBM PC_{jr} Adapter Cable for IBM Color Display
- IBM PC_{jr} Diskette-Drive Adapter
- IBM PC_{jr} Keyboard Cord
- IBM Personal Computer Graphics Printer
- IBM Color Display
- IBM PC_{jr} 5-1/4 inch Diskette Drive
- IBM PC_{jr} Internal Modem
- IBM PC_{jr} Parallel Printer Attachment
- IBM Personal Computer Printer Cable
- IBM Printer Stand

Section 2. Introduction to Diagnostics

Contents

Required Items for Diagnostics	2-3
How to Perform Advanced POST	2-4
How to Perform Advanced Tests	2-8

Diagnostics

Notes:

2-2

Required Items for Diagnostics

In order to perform all of the advanced diagnostics, you must have:

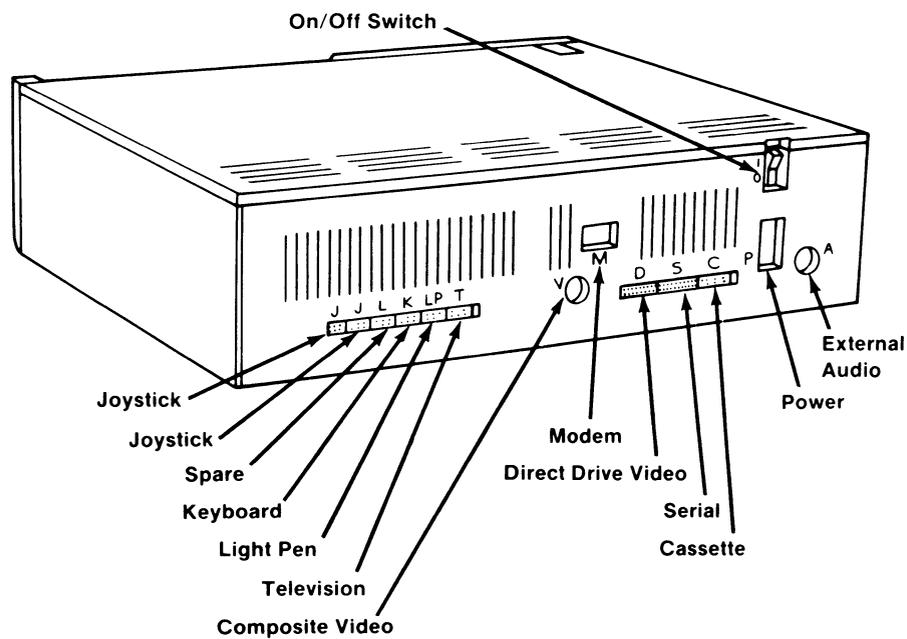

- A system unit
- A keyboard
- A known good television receiver
- A service plug
- A POST-loop plug
- A parallel printer attachment wrap plug
- A serial wrap plug
- A Triplet Model 310 Multimeter (or equivalent)
- Access to a set of known good replacement parts

Diagnostics

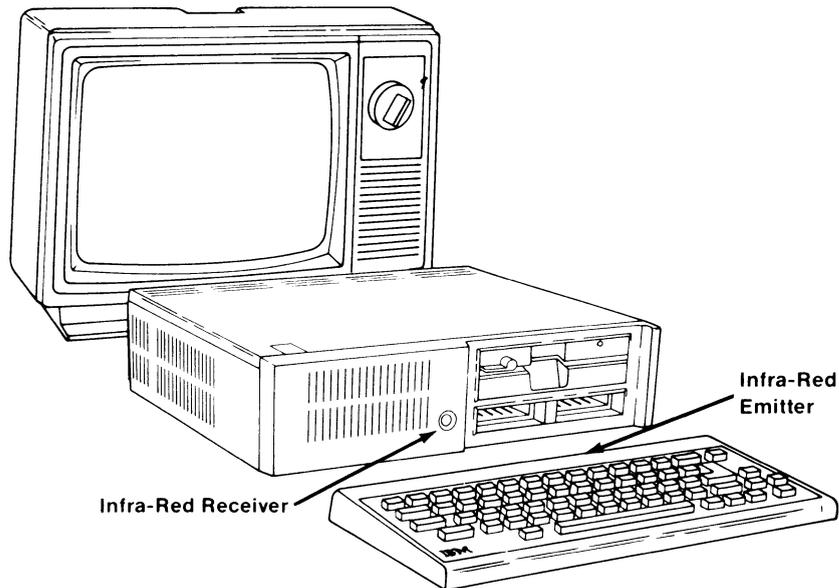

How to Perform Advanced POST

Before you perform advanced POST, do the following:

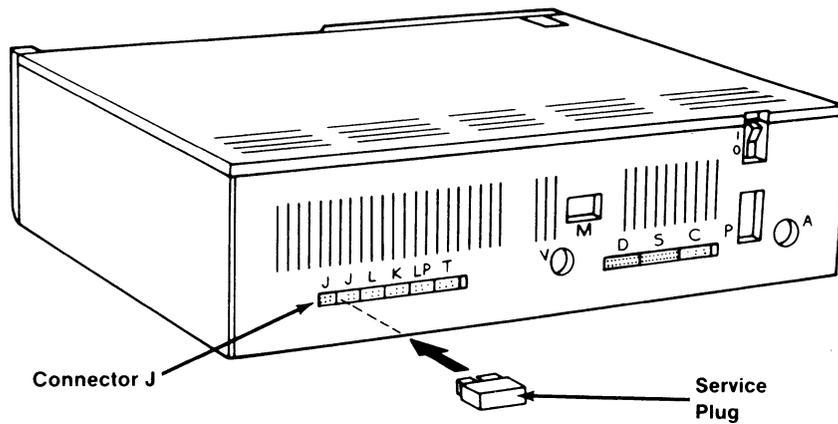

1. Set the system unit's Power switch to Off.
2. Set the display's Power switch to Off.
3. Connect the power transformer's power cord to a functioning, properly grounded outlet.
4. Install all connectors securely in their proper locations.

5. Remove any cartridge, cassette, or diskette from the system unit and attached devices.
6. If the cordless keyboard is being used without its optional keyboard cord:
 - Position the keyboard within 12 inches of the front of the system unit.
 - Remove any obstructions between the infra-red (IR) emitter in the back of the keyboard and the IR receiver on the system unit.

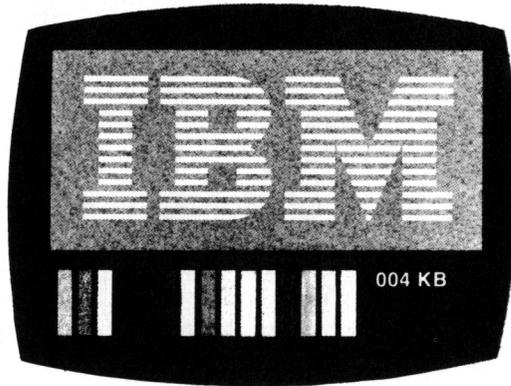

7. Plug the service plug into the system unit connectors J.

8. Turn the display's brightness, contrast, and volume controls to mid-range.
9. Set the display's Power switch to On.
10. Set the system unit's Power switch to On.

Advanced POST begins as soon as the system unit Power switch is set to On. It takes as long as one minute to complete. While advanced POST is running:

- You see a stable IBM logo and 16-color test pattern on your screen.

Diagnostics

- You hear one beep.
- If attached, the diskette drive's red light switches on for a few seconds and then switches off.

When advanced POST completes without detecting a failure, the BASIC screen appears.

```
The IBM Personal Computer Basic
Version C1.20 Copyright IBM Corp.1981
XXXXX Bytes free
OK
—

1LIST 2RUN= 3LOAD" 4SAVE" 5CONT=
```

If advanced POST detects a failure, you will receive an incorrect audio response (no beep, two beeps, or three beeps), an incorrect screen, an error message, or any combination of these. In these cases, see the Advanced POST Error Table on page 3-000-8 for the recommended action.

After you have followed the above steps once, all you have to do when asked to perform advanced POST is:

1. Set the system unit's Power switch to Off.
2. Wait five seconds.
3. Set the system unit's Power switch to On.

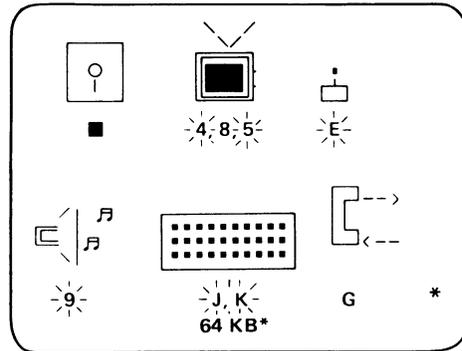

How to Perform Advanced Tests

Advanced tests are the tests you choose from the advanced-test menu. The advanced test menu is stored in the system unit's read only memory (ROM).

When you are asked to bring up the advanced-test menu, follow these steps:

1. Set the system unit's Power switch to On.
2. Wait until advanced POST completes and the BASIC screen appears.
3. Press and hold the Ctrl and Alt keys, and then press the Ins key.
4. Release all keys when the screen goes blank.

The IBM logo appears, the diskette drive (if attached) red light switches on for a moment, and you hear one beep. Then the advanced-test menu appears.

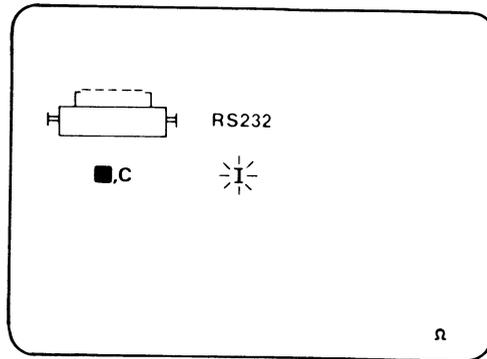

Diagnostics

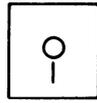

The advanced-test menu consists of symbols, with each symbol representing one area of the IBM PCjr. The letters or numbers below the symbols are IDs of tests you can perform.

If you see a “*” in the lower right-hand corner of the advanced-test menu, the menu has another page of symbols. When the cursor is moved to the last ID on the screen, moving it again causes this next menu page to appear.

On the last menu page, a “n” is in the lower right-hand corner. When the cursor is moved to the last ID on this screen, moving it again causes the first menu page to reappear.

The following chart explains what the symbols on the advanced-test menu represent.

Diskette-drive test

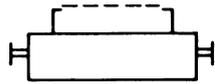

Display and light pen test

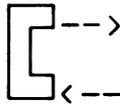

Joystick test

Sound test

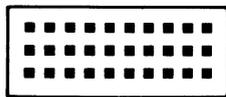

Graphics printer test

Internal modem test

RS232

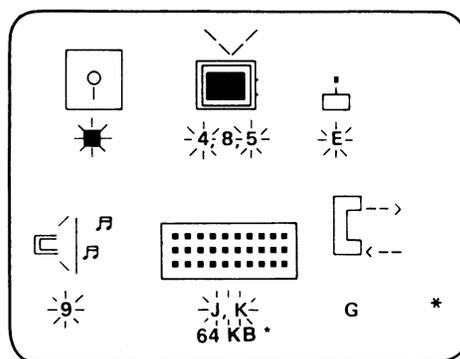

Serial port test

Keyboard test

Diagnostics

When the IBM PCjr senses the presence of a device interface, the ID under the symbol for that device blinks. The device interface is the electronic circuitry necessary for the system unit to control a particular device. In the figure below, the interfaces for diskette drive, display, joystick, and sound are sensed.

The IDs for joystick and sound always blink because their interfaces are on the system board. The blinking does NOT mean a joystick or external speaker is installed.

The diskette-drive interface is on the diskette-drive adapter. The ID under the diskette-drive symbol therefore blinks only when the diskette-drive adapter is installed.

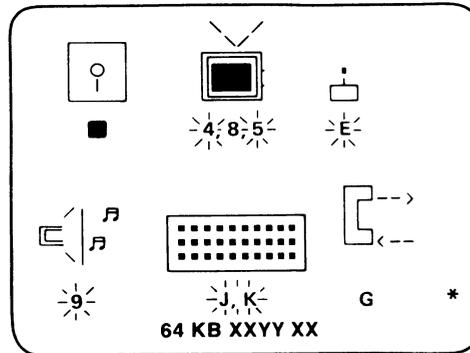

The IDs "4" and "5" under the display symbol blink all the time. ID "8" blinks when the 64KB memory and display expansion is present. A list of interfaces and their locations follows:

Interface	Location
Diskette Drive	Diskette-drive adapter
Display	System board and 64KB memory and display expansion
Internal modem	Internal modem
Joystick	System board
Keyboard	System board
Light pen	System board
Memory	System board and 64KB memory and display expansion
Parallel printer	Parallel printer attachment
RS232	System board
Sound	System board

Diagnostics

While the advanced-test menu is on your screen, a memory test is running continuously. The number incrementing at the bottom of the screen shows what segment of memory is being tested. If a memory failure is detected, the number stops incrementing and the "*"

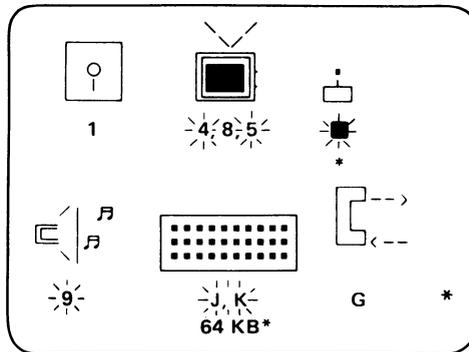

next to it is replaced by an error message. If this failure occurs, make a note of the error message and go to PIC "Memory."

Before starting an advanced test, go to the PIC for that test. At the beginning of each PIC any special requirements or set-up instructions are explained to you.

You move the cursor to the test's ID by pressing the Ins key. When you are ready to start the test, press the Enter key and the test begins.

The test is finished when a message appears under the symbol's ID. If "*" appears, no failure was detected.

Diagnostics

If something other than “*” appears, a failure was detected and you should follow the PIC for that test.

If you want to stop a test that is running, press the Fn key, and then press the B key. Depending on which test is running, you can get one of several responses after pressing Fn-B. The following table lists the responses.

Test Running	Response to Pressing Fn-B
Diskette Drive Internal Modem Sound Parallel Printer Attachment	(If the system unit beeps, press Fn-B again.) Test may stop immediately. Message is "FFFF."
Display RS232	Test stops immediately. Message is "FFFF."
Keyboard	The Fn and B keys must be shown on the screen before using them to abort the test. Test stops immediately. Message is "*."
Joystick Light Pen	Test stops immediately. Message is "*."

The "FFFF" message lets you know that the test was stopped before completion.

When you want to remove the advanced-test menu from your screen, press and hold the Ctrl and Alt keys, and then press the Del key.

```

PICs

DID ADVANCED POST SUCCESSFULLY COMPLETE?

NO Make a note of how advanced POST failed.

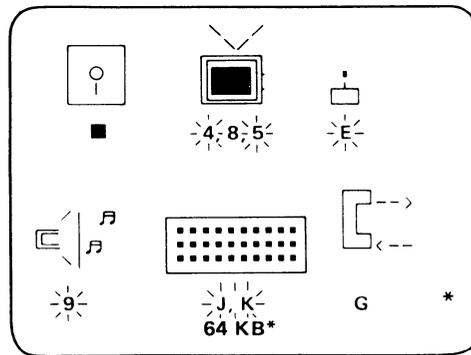

Go to the Advanced POST Error Table on page 3-000-8.

YES 

Start 3-000-1

Bring up the advanced-test menu to your screen. (If you need instructions on how to bring up the advanced-test menu, go to page 2-8).

The IBM logo appears, the diskette-drive (if attached) red light switches on for a moment, and you hear one beep. Then the advanced-test menu appears.

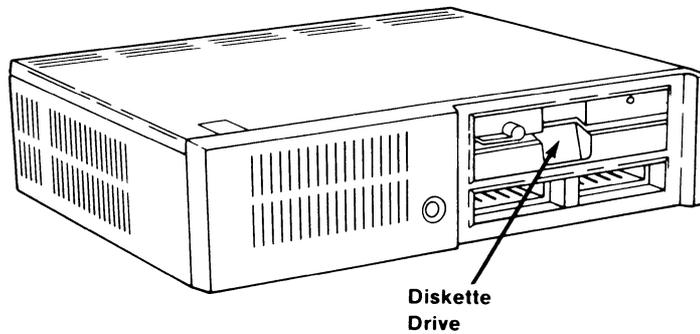

DID THE ADVANCED-TEST MENU APPEAR ON YOUR SCREEN?

NO Go to the PIC "Keyboard" on page 3-300-1.

YES 

3-000-2 Start

There may be a diskette drive installed in the system unit.

PICS

IS A DISKETTE DRIVE INSTALLED IN THE SYSTEM UNIT?

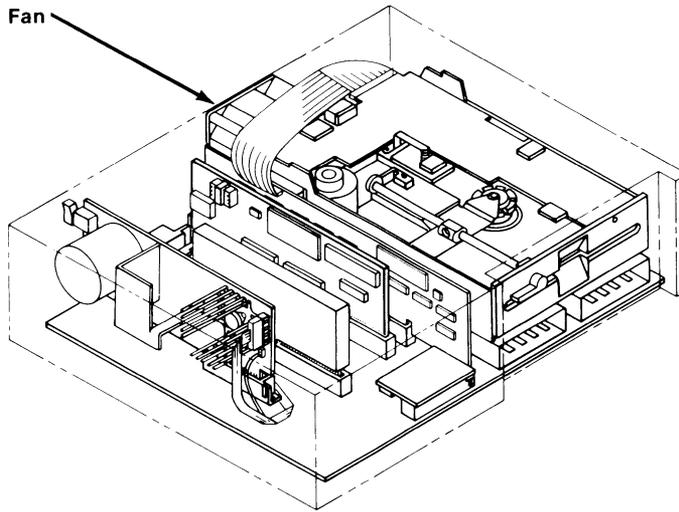

NO Go to page 3-000-5.

YES 

Start 3-000-3

1. Set the system unit's Power switch to Off.
2. Remove the system unit top cover.
3. Set the system unit's Power switch to On.
4. Observe the diskette-drive fan.

Diskette-Drive
Fan

IS THE DISKETTE-DRIVE FAN RUNNING?

NO Go to page 3-000-6.

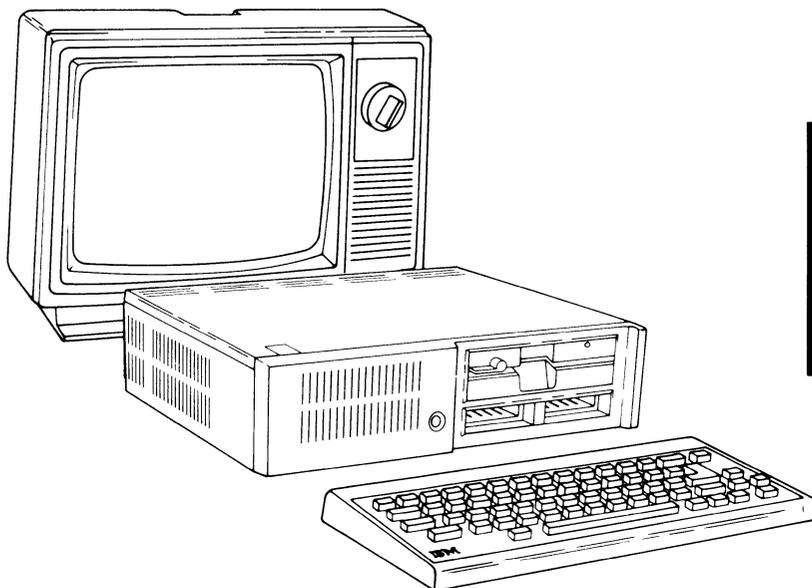

YES 

3-000-4 Start

You are now ready to proceed with the advanced tests.

If you do not know what area of the IBM PCjr may be failing, you have an undetermined problem.

If a failure occurs only occasionally, you have an intermittent problem.

PICs

DO YOU HAVE AN UNDETERMINED OR INTERMITTENT PROBLEM?

NO Go to the PIC for the area you want to test. (See the Contents page at the beginning of Section 3 for the PIC locations).

YES Go to the PIC "Undetermined Problem" on page 3-010-1.

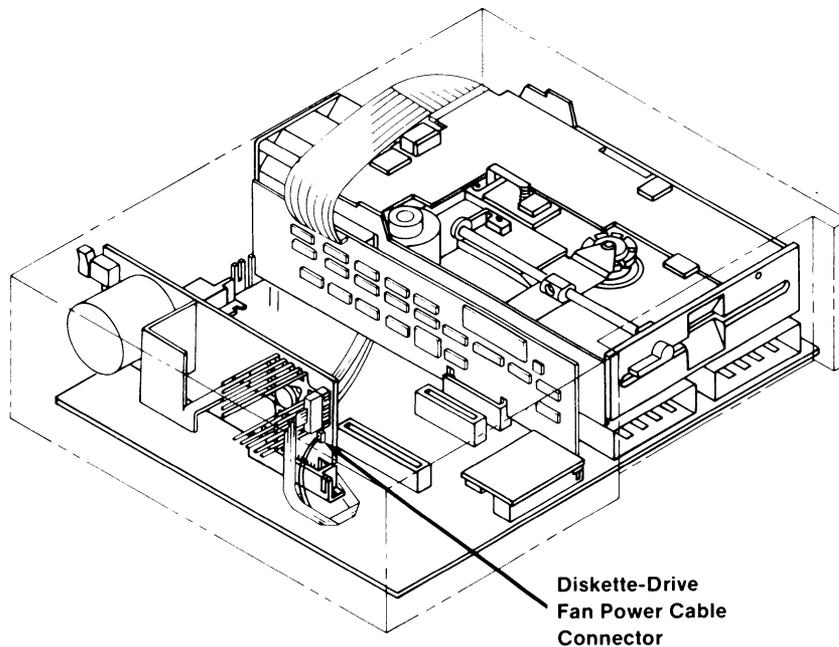

Start 3-000-5

The diskette-drive fan is not running.

1. Set the system unit's Power switch to Off.

Warning: Be careful when the top cover is off the system unit. The components on the power board can become hot with the system unit on.

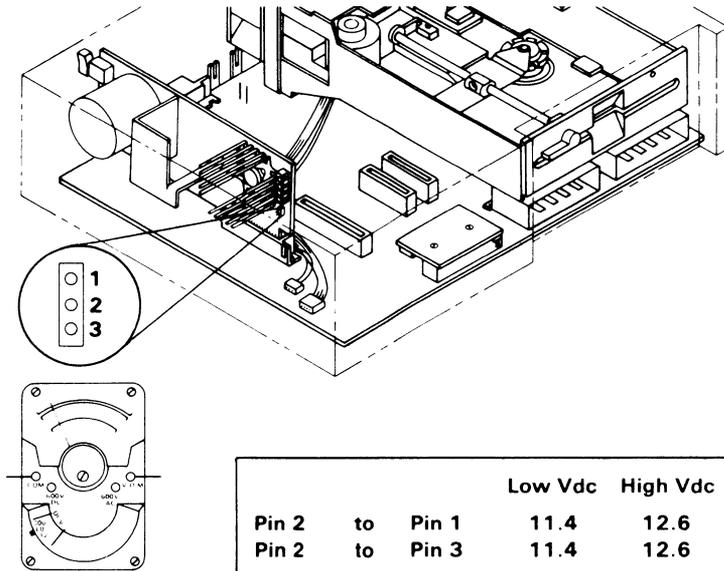

2. Allow the power board to cool.
3. Disconnect the diskette-drive fan power cable from the power board.

CONTINUE 

3-000-6 Start

4. The voltages at the diskette-drive fan connector on the power board should be within the ranges listed below.

PICs

WERE YOU ABLE TO READ THE CORRECT VOLTAGES?

NO The power board is bad. Replace it.

Repeat advanced POST and the advanced tests to ensure that the IBM PCjr is operating correctly.

YES The diskette-drive fan is bad. Replace it.

Repeat advanced POST and the advanced tests to ensure that the IBM PCjr is operating correctly.

Start 3-000-7

Advanced POST Error Table (Part 1 of 4)

POST Error	Problem Area	What To Do	Page
No beep. No image or image on screen wrong	Power	Go to PIC "Power."	3-020-1
One beep. No image or image on screen wrong	Display	Go to PIC "Display."	3-500-1
Two beeps. No image or image on screen wrong	Power	Go to PIC "Power."	3-020-1
Three beeps. No image or image on screen wrong	Memory	Replace 64KB memory and display expansion. Repeat advanced POST. If same error, go to PIC "Memory."	4-200-1
"X" can be any number.			
Before replacing any item, ensure that all internal cables are correctly connected. Treat replaced items with care. You may be asked to reattach them.			

3-000-8 Start

Advanced POST Error Table (Part 2 of 4)

POST Error	Problem Area	What To Do	Page
Advanced POST, or portion of it, goes into loop	System board	Replace system board.	4-100-1
No beep. ERROR 0AXX	Memory	Replace system board. Repeat advanced POST. If same error, go to PIC "Power."	4-100-1
No beep. ERROR 0BXX	Memory	Replace 64KB memory and display expansion. Repeat advanced POST. If same error, go to PIC "Memory."	4-200-1
No beep. ERROR 0CXX	Memory	Replace 64KB memory and display expansion. Repeat advanced POST. If same error, go to PIC "Memory."	4-200-1
"X" can be any number.			
Before replacing any item, ensure that all internal cables are correctly connected. Treat replaced items with care. You may be asked to reattach them.

Advanced POST Error Table (Part 3 of 4)

POST Error	Problem Area	What To Do	Page
No beep. ERROR 1YXX	Memory	Replace system board. Repeat advanced POST. If same error, go to PIC "Power."	4-100-1
No beep. ERROR 2000	Keyboard	Replace keyboard. Repeat advanced POST. If same error, go to PIC "Keyboard."	3-300-1
No beep. ERROR 21XX	Infra-Red	Replace infra-red receiver. Repeat advanced POST. If same error, go to PIC "Keyboard."	4-300-1
No beep. ERROR 22XX	Keyboard	Replace keyboard. Repeat advanced POST. If same message, go to PIC "Keyboard."	3-300-1
"X" can be any number.			
Before replacing any item, ensure that all internal cables are correctly connected. Treat replaced items with care. You may be asked to reattach them.			

3-000-10 Start

Advanced POST Error Table (Part 4 of 4)

POST Error	Problem Area	What To Do	Page
No beep. ERROR 23XX	Cassette or Serial	Replace system board. Repeat advanced POST. If same error, go to PIC "Power."	4-020-1
No beep. ERROR 24XX	Modem	Replace internal modem.	4-830-1
No beep. ERROR 25XX	Cartridge	Go to PIC "Cartridge."	3-810-1
No beep. ERROR 26XX	Diskette drive	Replace diskette-drive adapter. Repeat advanced POST. Is same message, go to PIC "Diskette Drive."	4-600-1
Any ERROR message not listed in this table	Service plug	Ensure that service plug is good and installed correctly. Repeat advanced POST. If same message, replace system board.	2-6
"X" can be any number.			
Before replacing any item, ensure that all internal cables are correctly connected. Treat replaced items with care. You may be asked to reattach them.

Start 3-000-11

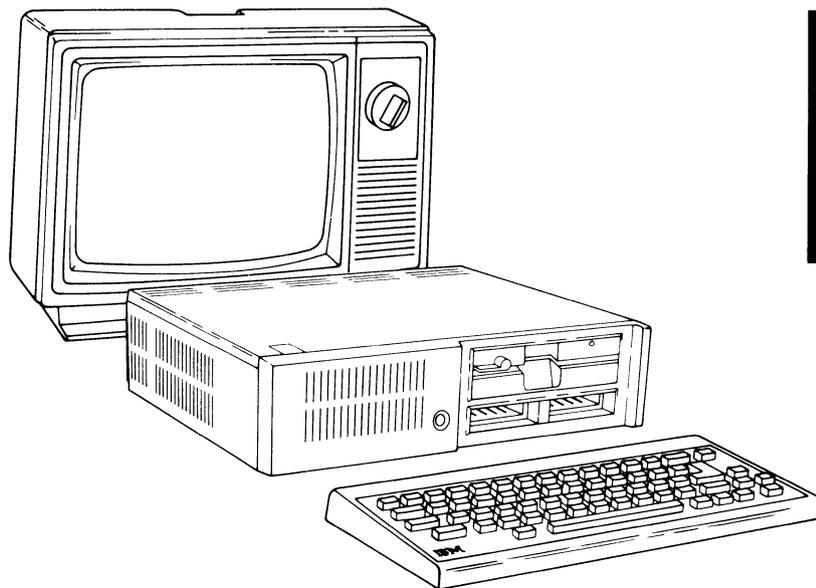

Notes:

3-000-12 Start

Undetermined Problem

You are entering this PIC for one of the following reasons:

- You have an undetermined problem.
- You have an intermittent problem.

DO YOU HAVE AN UNDETERMINED PROBLEM?

NO Go to page 3-010-4.

YES 

Undetermined Problem 3-010-1

All IBM PCjr service activity should begin at the PIC
"Start."

Start

This is the entry point for using all of the PICs. Start here when beginning any service activity.

Follow the 10 steps listed in "How to Perform Advanced POST" beginning on page 2-4, then return to here.

Note: If advanced POST successfully completes, the BASIC screen appears.

PICs

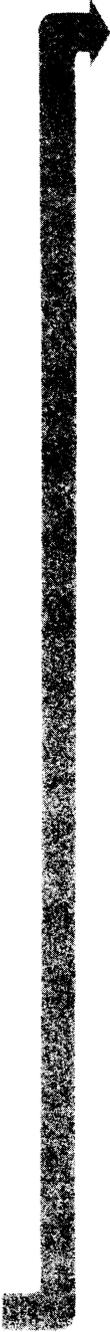

DID ADVANCED POST SUCCESSFULLY COMPLETE?

**DID YOU FOLLOW THE STEPS IN THE PIC
"START"?**

NO Go to the PIC "Start" on page 3-000-1.

YES 

3-010-2 Undetermined Problem

1. Bring the advanced-test menu to your screen.
2. Perform the advanced tests for all devices attached to the IBM PC_{jr}. Before performing an advanced test, refer to that test's PIC for special requirements and set-up instructions.
 - Keyboard.
 - Display.
 - Sound.
 - RS232.
 - Diskette drive, if present.
 - Internal modem, if present.
 - Attachable joystick, if present.
 - Light pen, if present.
 - Parallel printer attachment, if present.
 - Graphics printer, if present.

See the Contents page at the beginning of Section 3 for the PIC locations.

PICs

DID ANY OF THE ADVANCED TESTS FAIL?

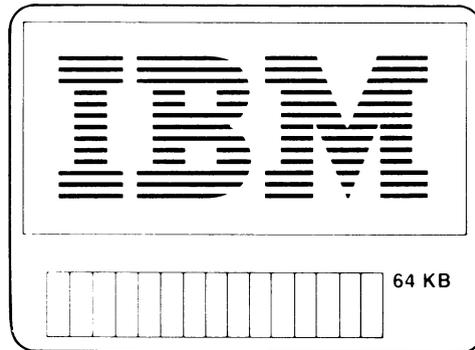

YES Go to the PIC for the failing device.

NO

Undetermined Problem 3-010-3

You may have an intermittent problem.

Advanced POST can be made to repeat indefinitely. It tests the system board and the memory. The loop stops if a failure in either area is detected.

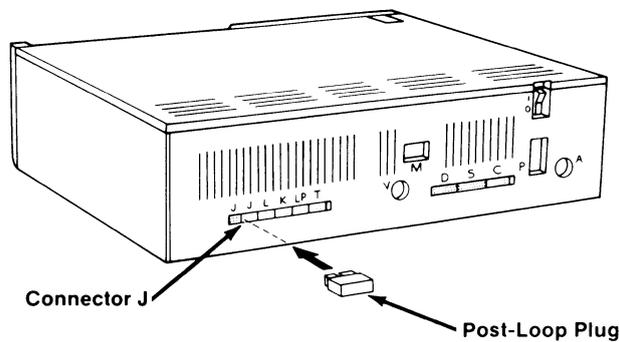

DO YOU WANT TO LOOP THE ADVANCED POST?

NO Go to page 3-010-6.

YES 

3-010-4 Undetermined Problem

1. Set the system unit's Power switch to Off.
2. Plug the POST-loop plug into the system unit connector Js.
3. Set the system unit's Power switch to On.

DID ADVANCED POST LOOP SEVERAL TIMES WITHOUT DETECTING A FAILURE?

NO Make a note of the failure.

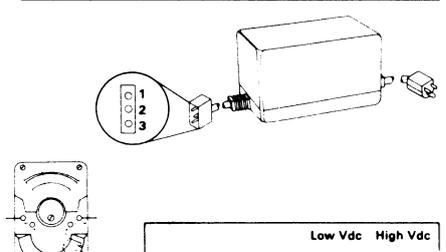

Go to the Advanced POST Error Table on page 3-000-8.

YES

Undetermined Problem 3-010-5

1. Turn to page 3-020-8 in PIC "Power."
2. Ensure that all voltages described on pages 3-020-8 through 3-020-10 are within their specified ranges.

1. Set the system unit's Power switch to Off.
2. Unplug the power transformer cable from the system unit connector P.
3. The voltages at the power transformer cable plug should be within the ranges listed below.
4. Measure these voltages now.

		Low Vdc	High Vdc
Pin 1	to Pin 3	15 V	

ARE ALL THE VOLTAGES WITHIN THEIR SPECIFIED RANGES?

- NO** The PIC "Power" indicates which FRU is bad. Replace that FRU.
- Repeat advanced POST and the advanced tests to ensure that the IBM PCjr is operating correctly.
- YES** You have finished the undetermined problem PIC. If you still have an unsolved problem, you should seek technical assistance.
