## X-C 6000/X-C 6250 Computer Battery Messages

The Battery Status and Battery Maintenance applications display the type of battery installed in the computer. Currently the X-C 6000 and X-C 6250 computers use Nickel Cadmium (NiCd) or Nickel Metal Hydride (NiMH) batteries. Files containing the battery type parameters are updated and released periodically. If the battery parameters in a particular battery are not identified in a file on the computer, a type number or unknown will be displayed instead of NiCd or NiMH. Regardless of the battery type displayed, including "Unknown" or "Type#x," the battery will charge and function properly. The Battery Maintenance deep cycle discharge process will also work properly.

You may need to update the XCTOOLS or MOBILE COMPUTER TOOLS files contained on that computer. Contact your company's help desk for assistance.
